EDUCATION

Computer Science · CÉGEP André-Laurendeau

Graduated 2026

SKILLS

Languages: French, English

Programming Languages: TypeScript, JavaScript, HTML, CSS, Python, Java, C#, SQL

Application Development: React, Vue, Nuxt, Angular, Next.js, Spring Boot, ASP.NET Core, Node.js, PostgreSQL, SQL Server, NeonDB, Tailwind CSS

Infrastructure: Linux (NixOS), Kubernetes, Docker, Flux, Helm, colmena, SOPS, Vault, Authentik, Tailscale, Prometheus, Loki, Grafana

Other: Git, Agile, Scrum, Vercel, Claude API, Jira, Notion, Figma

EXPERIENCE

Full-Stack Developer – OpenPayrun

Jul 2026 – Present

Services Conseils Sensoroli Inc. · Montréal, QC

open-payrun.vercel.app

- Angular, TypeScript, HTML, CSS, C#/.NET, SQL Server: built a Quebec payroll calculator covering QPP, EI, QPIP, and income tax withholding, to stop relying on QuickBooks for in-house payroll
- Docker, Kubernetes, Tailscale: REST API backend self-hosted on the BiggerWorld cluster; frontend on Vercel — avoids Oracle Cloud VM wait times and eliminates hosting costs

Full-Stack Developer Intern – Internal Marketing Tool

Jan 2026 – May 2026

EnJoySocial · Montréal, QC

marketing-tool-one.vercel.app

- Vue, Nuxt, TypeScript, HTML, CSS, NeonDB, ApexCharts: built an internal budget management tool with colorblind-friendly charts and forecasting, because tables weren't intuitive enough for tracking campaign performance
- Claude API: conversational chatbot to query budget data in plain English

Full-Stack Developer Intern – Platform Prototypes

Dec 2024 – Dec 2025

EnJoySocial · Montréal, QC

enjoysocial.ca

- React Native, Nuxt, TypeScript: built a gamified social platform from scratch (groups, events, marketplace, quests), migrating from mobile to web after a startup direction change
- Agile: sprint planning and build presentations each iteration directly with the CEO, CTO, marketing, and design team

INFRASTRUCTURE

BiggerWorld

Feb 2026 – Present

Multi-node homelab

github.com/StacAttacc/BiggerWorld

- Linux (NixOS), k3s, colmena: built a Kubernetes cluster from spare hardware, every host declared in a Nix flake and reprovisioned from scratch with a single command
- Flux, Helm, SOPS: CI/CD pipeline via GitOps — every workload deploys automatically from Git, secrets encrypted at rest and decrypted at runtime
- Authentik, Vault, Tailscale: SSO across all services, runtime secret injection, and public exposure via Tailscale Funnel without opening firewall ports
- Prometheus, Loki, Grafana: full observability stack, metrics, logs, and dashboards across all cluster workloads

PROJECTS

Prose

Sep – Dec 2025

Academic project

prose-jet.vercel.app

- React, JavaScript, HTML, CSS: built the notification subsystem and navigation end-to-end; hardened security and built i18n infrastructure across the full codebase
- Docker, Spring Boot, Java, PostgreSQL, SQL: rebuilt our cégep's internship platform with a 5-person team over 6 Agile sprints, because the existing platform's UI and UX needed a complete overhaul

Next Stitch

Jan – Jun 2026

Personal project

next-stitch-henna.vercel.app

- React, Next.js, TypeScript, HTML, CSS, NeonDB: built a personal sewing project manager to replace a scattered notes-and-camera-roll workflow, with pattern tracking, progress photos, and checklists
- Claude API, next-auth: AI-generated pattern drafts for when no reference exists; multi-user authentication
