

Sensini Valitiana

Full-Stack Developer

438-836-7181 | s.valitiana@gmail.com | sensini-valitiana.vercel.app | github.com/StacAttacc | linkedin.com/in/sensini-valitiana

EDUCATION

College Diploma in Computer Science Technology | CÉGEP André-Laurendeau

Graduated 2026

SKILLS

Languages: French, English

Programming: TypeScript, JavaScript, HTML, CSS, Python, Java, C#, SQL

Frontend: Vue, Nuxt, React, Next.js, Angular, Tailwind CSS

Backend: Node.js, Spring Boot, ASP.NET Core

Databases: PostgreSQL, SQL Server

Tools: Git, Docker, Kubernetes, Linux, Agile, DevOps, Vercel, Flux, Claude API, Jira, Notion, Figma

EXPERIENCE

Full-Stack Developer – OpenPayrun

Services Conseils Sensoroli Inc. | Montréal, QC

Jul 2026 – Present

open-payrun.vercel.app

- Replaced QuickBooks for in-house payroll by building a Quebec payroll calculator (QPP, EI, QPIP, income tax) in Angular, C#/.NET, and SQL Server
- Designed the REST API and EF Core data layer with an XUnit test suite to keep payroll calculations verifiable
- Deployed the frontend on Vercel and self-hosted the backend via Docker for a cost-effective full-stack split

Full-Stack Developer Intern – Internal Marketing Tool

EnJoySocial | Montréal, QC

Jan 2026 – May 2026

marketing-tool-one.vercel.app

- Replaced raw budget tables with a Vue/Nuxt dashboard of KPI charts and cards (ROI, ARPU, campaign burn rate) with colorblind-friendly visuals and ApexCharts forecasting, backed by PostgreSQL and deployed on Vercel
- Built a Claude API chatbot letting the team query budget data in plain English without navigating the dashboard

Full-Stack Developer Intern – Social Platform

EnJoySocial | Montréal, QC

Dec 2024 – Dec 2025

enjoysocial.ca

- Built a full social platform from scratch at an early-stage startup (groups, events, marketplace, and quests) in React Native, then rewrote the entire platform in Nuxt after a mobile-to-web pivot
- Designed and maintained the full PostgreSQL data model across all modules, migrating the schema cleanly through the pivot
- Demoed new features directly to the CEO, CTO, and design team each sprint, translating technical progress into product feedback and next-sprint priorities

PROJECTS

Prose

Academic project: internship platform rebuild

Sep – Dec 2025

prose-jet.vercel.app

- Rebuilt our cégep's internship platform with a 5-person team over 6 Agile sprints; owned the notification subsystem and navigation end-to-end
- Hardened security to protect student records and built i18n infrastructure for bilingual (FR/EN) support across a Spring Boot and PostgreSQL backend in Docker and a React frontend on Vercel

Next Stitch

Personal project: sewing project manager

Jan – Jun 2026

next-stitch-henna.vercel.app

- Built a sewing project manager in Next.js, TypeScript, and PostgreSQL (pattern tracking, progress photos, and checklists) to replace an ad hoc notes-and-photos workflow; deployed on Vercel
- Integrated the Claude API to generate drafts when no reference photo exists and NextAuth for multi-user authentication

BiggerWorld

Personal project: self-hosted homelab cluster

Feb 2026 – Present

github.com/StacAttacc/BiggerWorld

- Built a self-hosted Kubernetes cluster to get production-grade infrastructure (SSO, secret management, observability) without cloud hosting costs
- Set up GitOps CI/CD with Flux to auto-deploy every workload from Git, keeping infrastructure fully reproducible from code
